

3. Partnership Strategy & Progress

3.1 Initial Strategy

Partnership Outreach Summary

Following the market entry research, we initiated outreach to several established medical tourism platforms to validate a platform-first market entry strategy.

3.2 Partnership Outreach

Organisation	Status	Outcome
Acibadem Healthcare Group	Responded	Referral agreement received for review but no longer response.
Medical Departures	Responded	Additional information submitted; no further progress.
Bookimed	Responded	Not accepting new partnership applications.
Other shortlisted platforms	Contacted	No meaningful response received.

3.3 Key Findings

Strategy Update

Based on the outreach results, the platform partnership strategy did not provide a clear path for early business development. Most platforms were either not accepting new partners, required lengthy onboarding, or did not progress beyond the initial conversation.

As a result, the business strategy has shifted towards **direct hospital partnerships**, which offer:

- Direct relationships with healthcare providers.
- Better long-term commercial opportunities.
- Greater control over patient experience.

- The ability to build an independent partner network instead of relying on third-party platforms.

3.4 Professional Communication

Professional Communication

One observation from the outreach process was that communication was conducted using a generic email address. A professional domain email (e.g., partnerships@mediassiat.com) is expected to improve business credibility, strengthen brand trust, and increase response rates from hospitals and international healthcare partners during future partnership discussions.

3.5 Project Operations

Project Operations

To support efficient project execution, the project management infrastructure has been established. **Jira** has been configured for project planning, task management, progress tracking, and team collaboration. This provides a centralized workflow for managing project activities, monitoring milestones, and improving overall execution.
